

SAAD UR REHMAN SYED

Kanagawa, Japan | saadirfan803@gmail.com | linkedin.com/in/saad-syed-169786214 | github.com/saadJP23

PROFESSIONAL SUMMARY

Full-stack engineer with hands-on experience shipping production systems, ranging from Stripe-integrated e-commerce platforms to AI-powered computer vision tools. Proficient in managing the entire development lifecycle, from frontend UI development to machine learning pipelines, cloud deployment, and cross-functional team collaboration in bilingual business environments.

EXPERIENCE

Common.inc | Web Developer Intern

Tokyo, Japan | Feb 2025 – May 2025

- Rebuilt and maintained client-facing web pages using WordPress, HTML5, CSS3, and JavaScript, increasing visual consistency across 15+ pages and reducing reported UI defects by ~40% within the first sprint cycle.
- Collaborated with UI/UX designers and project managers in a cross-functional agile team, accelerating feature delivery cadence by ~30% through tightened PR review cycles and shared component standards.

7-Eleven Japan | Store Clerk (Part-time, concurrent with studies)

Atsugi, Japan | Mar 2020 – Present

- Managed daily high-volume store operations, inventory tracking, and automated point-of-sale systems while delivering quality customer service in a fast-paced retail environment.
- Maintained flawless, face-to-face professional communication exclusively in Japanese, multitasking efficiently to successfully balance rigorous full-time academic studies with workplace responsibilities.

LEADERSHIP & PROJECTS

TabeHub (Final-Year Capstone Project) | Group Project | <https://order.tabehub.xyz>

- **Next.js, TypeScript, Supabase, Stripe, Tailwind CSS** – Spearheaded an engineering team to deliver a QR-based table ordering platform for Japanese izakayas, reducing average order fulfillment time by ~45% compared to traditional paper-based workflows by enabling guests to browse menus, place orders, and pay entirely within the mobile browser.
- Engineered real-time order state synchronization across 10+ simultaneous table sessions using Supabase live subscriptions, cutting staff intervention per table by ~50%; integrated end-to-end Stripe payment APIs with secure account persistence and automated reservation management.

ShopScout | Independent Full-Stack Development | www.shopscout.org

- **React, Node.js, Express, MySQL, Stripe, AWS EC2, Docker Compose, Nginx, Certbot** – Engineered a production e-commerce platform that reduced page load time by ~35% via Nginx reverse proxy with static asset caching and Gzip compression. Achieved 100% Stripe webhook delivery reliability through verified event signature validation, automatically syncing inventory and dispatching transactional email confirmations on every order.
- Reduced environment setup and deployment time by ~55% by containerizing the full application stack with Docker Compose; provisioned on AWS EC2 with Certbot-managed HTTPS, eliminating manual SSL renewal overhead.

Chefly | Deep Learning & Full-Stack Development | cheflys.com

- **Flask, Python, MySQL, TensorFlow, OpenAI, Cloudinary, PyTorch, scikit-learn** – Designed a multi-modal AI cooking engine that achieved 92%+ food classification accuracy by fine-tuning MobileNetV2 and EfficientNetB0 CNNs on a custom dataset via TensorFlow pipelines, reducing dish identification latency by ~70% vs. baseline text-only search.
- Reduced average recipe search response time by ~65% by unifying three data sources (local MySQL, Spoonacular API, OpenAI fallback) into a single ranked pipeline, increasing successful query resolution rate to 98%+ with graceful degradation across all failure modes.

NipponBid | Full-Stack SaaS Development | nipponbid-psi.vercel.app

- **React 18, Vite 5, Node.js, Express, MySQL, JWT, Vercel, Render, Railway** – Architected and deployed a full-stack Japanese car auction procurement platform, increasing dealer access to 1,400+ live Japanese auction listings by building an automated inventory sync pipeline that refreshes stock twice daily.
- Reduced bid-to-purchase processing time by ~60% by replacing manual spreadsheet workflows with a real-time status lifecycle (pending → won → purchased → shipped → delivered), supporting multi-user accounts with individual ledgers, proforma/final invoices, and B/L document management.
- Built a filterable admin analytics dashboard that cut financial reporting time by ~75%, surfacing KPIs across revenue, remittances, and receivables; deployed across Vercel + Render + Railway achieving under \$5/month total infrastructure cost.

TECHNICAL SKILLS

Programming & Design: Python, JavaScript, TypeScript, SQL, Java, HTML5/CSS3, MVC Pattern, RESTful Architecture, System Design

Frameworks & Database: React, Next.js, Node.js, Express, Flask, TensorFlow, PyTorch, scikit-learn, MySQL, PostgreSQL, Supabase

DevOps & Cloud Tools: AWS (EC2, Amplify, Lightsail), Docker Compose, Kubernetes, Nginx, Git/GitHub, Stripe API, Vercel, Render, Railway

Languages: English (Advanced Professional), Japanese (JLPT N2 Level), Urdu (Native)

EDUCATION

Temple University Japan Campus

Tokyo, Japan | May 2026

Bachelor of Science in Computer Science

- **Key Coursework:** Software Engineering, Database Management Systems, Deep Learning/Machine Learning Pipelines, Web Application Architecture, Algorithms & Data Structures.
